

Peer Evaluation Form for Group Work

Your name **RHEA MADHOGARHIA**

Write the name of each of your group members in a separate column. For each person, indicate the extent to which you agree with the statement on the left, using a scale of 1-4 (1=strongly disagree; 2=disagree; 3=agree; 4=strongly agree). Total the numbers in each column.

Evaluation Criteria	Self: Rhea	Group member: Paulina	Group member: Magnus	Group member: Esslam	Group member: Veronica
Attends group meetings regularly and arrives on time.	4	4	4	2	4
Contributes meaningfully to group discussions.	4	4	3	2	4
Completes group assignments on time.	4	4	4	2	4
Prepares work in a quality manner.	4	4	4	3	4
Demonstrates a cooperative and supportive attitude.	4	4	4	2	4
Contributes significantly to the success of the project.	4	4	4	2	4
TOTALS	24	24	23	13	24

Feedback on team dynamics:

1. How effectively did your group work together?

Overall, I think we worked well together. Quite a few times, I found myself having to prompt my team to get started on the next GP milestone, which was a bit frustrating considering we all knew when the due dates were. Sometimes I felt like I had to make a complete draft or baseline of the GP and then hand it off for iteration for things to get done. This got better, but I still felt like I had to get the ball rolling for most group discussions and GP milestone completions. Otherwise, when meetings did happen, we were all pretty aligned and able to split up work somewhat evenly.

2. Were the behaviors of any of your team members particularly valuable or detrimental to the team? Explain.

Magnus was quite excited about the idea and did a lot of work brainstorming the hardware design in GP2. He also took a lot of initiative on the final video. Paulina helped quite a bit with transcribing notes during our meetings and distilling them into paragraphs for our reports. Veronica, funnily enough, was in the process of releasing a food recipe sharing app on the app store (which we didn't even find out about until GP4). She became our iOS expert and helped us convert our Figma design into something that could be used in a mobile app format. Her passion for creating something people would actually want to use was awesome and came out the more we got to know her. Something quite frustrating was that during GP2 and GP3, as someone who did a lot of the data analysis, it seemed like Esslam wasn't interested in exploring design choices that wouldn't be our final product. A meeting we had talking about prototype designs became most of our teammates trying to convince Esslam of the value in our design choices based on our data analysis, which, by the end of the meeting, seemed Esslam had not looked at. Even when we all presented the data points that informed our decisions, we were met with pushback. There was a lack of willingness to be creative in favor of "what would realistically be our final project", which felt counterintuitive considering the spirit of the class lectures and the specific assignment. GP4 on, he contributed little to the reports and would only respond in our text message group chat occasionally to suggest something or ask for something to be done, rather than taking any action.

In addition, I am amending my previous submission because Esslam was completely AWOL for almost of GP4, and certainly all of GP5.

3. What did you learn about working in a group from this project that you will carry into your next group experience?

I think part of me learned that in order for work to really be equally shared, you have to shed some of your own responsibility. There were moments where I felt like I had done enough as an individual for the milestone, but no one else had really contributed yet. While I could have just continued to do more work, informing my group members that I was done, and reminding them of the deadline was helpful and motivated them to realize the deadline was fast approaching, and we needed to submit something soon. That being said, I did feel like, although this was an equally shared project, I felt somewhat like a team lead. Something I learned about being a team lead was that delegation is really important, and creating a tech spec was one of the first things I initiated, which helped us all wrap our heads around exactly what our project might look like. Furthermore, I think I learned how to synthesize conflicting design ideas from other teammates into a third, more neutral option that satisfied both parties. At the end of the day, the compromises we make are what make this a group rather than an individual project that we can ALL be proud of.
